

Bricks design system

Bricks didn't start as a design system. It started as a reimagining of the existing platform — new layouts, new interactions, and a hard look at whether the old visual language still worked.

The challenge

As we moved toward a new product experience across teams, we needed a shared design language that could keep experiences consistent while giving teams a foundation to build and scale from. The challenge was to build this quickly without compromising design quality or consistency.

My role

I helped establish the new design language and its foundations, and worked on defining what the core component layer should look like. I also created the guidelines that helped the team use AI to build components faster and consistently.

Scaling component creation with AI

Instead of prompting AI from scratch for every component, I created an MD guideline that encoded our design rules and decision making framework.

01 Define the rules

Documented the design language, component principles, do's and don'ts, properties, states and expected behaviours.

02 Guide the AI

The guideline also defined what AI should clarify when a designer's prompt was incomplete, instead of making assumptions.

03 Build with consistency

The team used the guideline alongside their prompts to generate the initial core components faster, while staying aligned with the system.

04 Design review

Generated components were reviewed and refined by designers before becoming part of the core system.

The goal wasn't to automate design. It was to automate the repetitive decisions so designers could focus on the quality of the system.

FOUNDATION

The building blocks that define Bricks' visual language

Color system

01 PRIMARY PALETTE

Primary Purple Palette

Refined tonal progression with smoother chroma transitions. Luxurious, luminous, and modern — without electric or neon quality.

Warm Neutral Palette

Warm undertone — used for surfaces and borders. Never mix with grey neutrals.

02 ACCENTS

Pistachio

Lavender

Butter

Grey

01 SYSTEM ICONS

02 3D ICONS

Grids & patterns

A glimpse into what gives the product its sense of order

01 LAYOUT STRUCTURE

Centered Layout

Content sits in center with empty space on both sides

Uses container, no margin applied

Full Width Layout

Content stretches across screen with internal padding

Uses side margins, content stretches

Mixed Layout

Main content + secondary panel with aligned structure

Uses container on desktop, structured alignment

02 SNAP LOGIC

A. Static state (before scroll)

- ✓ First card aligned to 16
- ✓ Second card partially visible
- ✓ Clear scroll affordance

B. Scroll state (during)

- ✓ Cards at screen edge
- ✓ No margin visible
- ✓ Smooth scroll transition

C. Snap state (after scroll)

- ✓ New card aligned to 16
- ✓ Next card shows peek
- ✓ Consistent alignment

Aspect	Mobile Web	Desktop Web	iOS	Android
Snap physics	Browser default	Browser default	Native (best)	Native (good)
Momentum decay	Inconsistent	Awkward	Excellent	Excellent
Velocity-based snap	Limited	Poor	Excellent	Excellent
Peek-next-card	✓	✗	✓	✓
Snap-on-release fidelity	Good	Poor	Excellent	Excellent

WHY GRIDS STILL APPLY HERE

The 4-column grid defines alignment and proportion across mobile layouts. Even when layouts break into scroll patterns, elements still follow grid-based spacing and sizing.

CORE COMPONENTS

Reusable patterns that bring the system to life across products

Buttons

01 VARIANTS — 6

					
Primary Main CTA — one per section	Secondary Supporting action alongside Primary	Tertiary (Ghost) Low-emphasis, repeated utility	Destructive Delete, remove — add confirmation	Link purple Inline nav, form-level links	Link black Inline nav, neutral emphasis

02 STATES — PRIMARY / M

					
Default Resting — P-700	Hover One step darker — P-600	Pressed Two steps darker — P-800	Focus 1px ring, Purple/300 — no fill change	Disabled Muted tokens — no pointer events	Loading Fill preserved — width locked

What the system unlocked

One visual language

A shared foundation brought consistency across products, from typography & spacing to components and interaction patterns.

Faster component creation

The AI guideline gave designers a consistent starting point while keeping design decisions and review with the team.

Built to scale

Teams have a shared foundation they can build on as new product needs emerge.
